ALL those suffering from foot, ankle and knee pain are made to believe that these ailments are age related and hence senior citizens are bound to suffer at advance age. Studies conducted abroad and also at Magnetron's Foot Doctor Clinic revealed that it is not true. In fact such ailments are acquired and not natural or age related. Extensive research by Magnetron's Foot

sole, transmitted to foot, ankle, knee and hip. While standing the Center Of Gravity balances itself and maintains natural position, as shown in the figure (a). Any shift in this line shall start developing deformities in lower limb i.e foot, ankle, knee and hip joint.

Fig (a) Red line indicates line passing through center of gravity; (b) Shift in center of gravity line.

By neglecting, we continue to shift Line of Gravity further away which results in further placement of foot away from the normal. When this shift continues, permanent deformities in the foot occur, as shown in fig (c).

Permanent foot deformities Fig(c).

However the major contributing factor for foot deformities are inappropriate selection of foot wear, use of highly worn out footwear for longer time, use of chappals and walking style.

When left unattended over years, the deformed legs cannot bear the weight of the body, there by walking becomes painful and it feels like "Life is not worth living".

Now the question arises whether it is possible to cor-

rect the deformities which have already occurred. Magnetron's Foot Doctor Clinic says "Yes it is possible" then how??

Better results can be obtained by Non- Invasive methods like building worn out cartilage using PEMFT (Magnetron) that improves self curing ability of the body and the use of customized foot match insoles and shoes which initiate the correction of deformity. The use of such foot-match insoles at early age shall totally eliminate the possibility of foot deformities.

To give an example, Mr. Manikchand Jain, 64 years, came with knee deformities as shown in figure (d) and after using customized insoles and magnetron treatment for four months showed marked improvement by increasing the joint space and restoration of gravity line as shown in figure (d). He is now not only able to go for morning walk but also climbs stairs comfortably. Experience it to

believe. This procedure is Non- invasive, needing no medication available at most affordable cost ranging from Rs. 5,000 to Rs. 20,000 depending on the conditions.
